

CLARION CAPITAL MULTI-ASSET

STRATEGY DESCRIPTION

Multi-Asset Portfolio wherein each individual algorithm has a weighted allocation computed by a dynamic quantitative analysis model for optimized risk and returns. These weight factors are recalibrated weekly for optimal fund performance.

For example:

- If algorithm #001 underperforms over the past few weeks, it is allocated only 3% of the total capital the following week.
- Conversely, algorithm #004 outperforms over the past few weeks and is therefore allocated 8% of the total capital the following week.

FUND MANAGER

Clarion Capital is a Dutch fund that specializes in actively trading through automated trading strategies. As a fund, we are constantly diversifying our portfolio by developing new algorithms that are unique in strategy and risk profile.

Within our portfolio of trading algorithms we find an optimal allocation through quantitative analysis.

Clarion Capital targets an annual net return of 20% for its participants.
